

# United States V.S USSR:

## Is it a development of technology or just political decision

### Number of tests, Population and Education gross rate from 1960 to 2010

Those blank showed the missing data.  
Where I used gross education rate to represent the educational conditions of the two countries, Which means the data can exceed 100% because the gross rate for educational attainment rate were counted repeatedly. However it still showed a growing trend. For USSR during the cold war years, its educational attainment rate (including professional training) was higher than the United States.

The developmment of nuclear industry in 1960s is a political driven result
